We perform tests of:

- full functionality of fire alarm and automation systems
- resistance to environmental, climatic and mechanical actions (vibrations, impacts, single surges, corrosion)
- resistance to disturbances of electromagnetic compatibility (losses, reductions and changes in supply voltage, electrostatic discharges, series of fast electric transients, voltage surges, actions of radio-frequency electromagnetic fields and other)
- threshold of activation of all types of fire detectors
- usability of test fire detectors
- properties of electrical equipment of buildings and electrical wiring
- IP rating.
