

Issuance date: 22.09.2023

Validity date: 22.09.2028

## Corrugated plastic pipes ( Pecor )

### Owner of the EPD:

VIACON ROMANIA SRL  
Address: Berlin str.3, Prejmer  
Brasov, Romania  
Website: [www.viacon.ro](http://www.viacon.ro)  
tel.: +40 268 516 440  
e-mail: [office@viacon.ro](mailto:office@viacon.ro)

### EPD Program Operator:

Instytut Techniki Budowlanej (ITB)  
Address: Filtrowa 1,  
00-611 Warsaw, Poland  
Website: [www.itb.pl](http://www.itb.pl)  
Contact: Michał Piasecki

[energia@itb.pl](mailto:energia@itb.pl)

ITB is the verified member of The European Platform for EPD program operators and LCA practitioner [www.eco-platform.org](http://www.eco-platform.org)

### Basic information

This declaration is the Type III Environmental Product Declaration (EPD) based on EN 15804+A2 and verified according to ISO 14025 by an external auditor. It contains the information on the impacts of the declared construction materials on the environment and their aspects verified by the independent body according to ISO 14025. Basically, comparison or evaluation of EPD data is possible only if all the compared data were created according to EN 15804+A2.

**Life cycle analysis (LCA):** A1-A3, A4, C1-C4 and D modules in accordance with EN 15804 (Cradle-to-Gate with options)

**The year of preparing the EPD:** 2023

**Products standards:** EN 13476-3+A1

**Service Life:** 100 years

**PCR:** ITB-PCR A v 1.6.

**Declared unit:** 1 ton

**Reasons for performing LCA:** B2B

**Representativeness:** Romanian, European

## MANUFACTURER

The ViaCon Romania company was founded in 2010, in Târgu Mureș. Currently, the ViaCon Group includes approximately 30 companies, with headquarters in: Austria, Bulgaria, Czech Republic, Denmark, Estonia, Finland, France, Germany, Lithuania, Latvia, Norway, Poland, Sweden, UK, Hungary, Slovakia, Romania, and Turkey. In September 2012, ViaCon inaugurated in the Graells & Llonch Industrial Park in Prejmer, located 10 km from Brașov, the first production line of corrugated steel metal structures in Romania. In 2014, ViaCon makes a new investment on the Romanian market by opening a second factory, in the "Tractorul" Brașov industrial area, where metal poles for public lighting are currently produced. In February 2016, ViaCon expanded its business with the acquisition of a Pecor Optima high-density polyethylene pipe production line (covered by this EPD). Pipes can be produced in different lengths with inner diameters between 300mm and 1200mm. The Pecor Optima line is installed at the factory in Prejmer, Brașov county, and is the third investment on the production side of the company. With this new production facility, ViaCon reaches the threshold of 6 million euros invested in the three factories in Romania. In addition to the production of corrugated steel structures, metal poles for lighting and polyethylene pipes, ViaCon is a supplier of other products like: geosynthetics, sound-absorbing panels, gabions. The company's mission is to constantly improve its products and to cooperate closely with its customers in order to be able to respond to market demands with products of the highest quality standard through design, technical assistance, consulting, but also through production quality.

Fig. 1. A view of VIACON ROMANIA SRL manufacturing plant (Prejmer, Brașov)

## PRODUCTS DESCRIPTION AND APPLICATION

Pecor pipes are made of high-density polyethylene (HDPE) with double wall. Corrugated outside wall of pipes provides high stiffness SN4 (4kPa). SN6 (6kPa). SN8 (8kPa). Smooth inside wall allows to achieve optimal hydraulic parameters. PECOR OPTIMA® system is widely used in civil engineering. Due to the fast assembly and very good strength and hydraulic parameters, the system has received wide recognition among designers and contractors. Unique spiral structural wall allows to get the optimal stress distribution on the whole pipe length and ensure the proper ring stiffness on each section. Smooth inside wall of PECOR OPTIMA® pipes allows to achieve good hydraulic parameters. PECOR OPTIMA® pipes produced by ViaCon

Romania are perfect for use in engineered structures: roads and railway culverts, shaft construction, ecological passages (for animals), relining of existing old culverts, forestry culverts. Pipes are light-weighted and easy to assembly thanks to structure and raw material used for the production. PECOR OPTIMA® pipes are produced with double wall, smooth inside and corrugated outside. The corrugation is stiff and can interact with surrounded soil. The standard lengths of PECOR OPTIMA® pipes are L= 6 m, 7 m, 8 m (pipes from DN 300 mm to 1200 mm), but also other required dimensions, from 3 m up to 12 m.

Pecor Quattro pipes are produced in range diameter DN/ID 200 -1000 mm. Pipes are produced acc. to norm SR-EN 13476-3. Pipe bell is formed at the production stage and it is integrated part of pipe which allows fast assembly. The rubber sealing ring mounted on the end of pipe guarantees tightness. Pecor Quattro pipes are used for building : gravity sewage system and storm water, road and railway culverts, culverts under forest roads, ecological culverts for small animals, retention tanks. Pecor Quattro system consists of: pipe jointing sleeves, double-bell couplings, elbows: 15°, 30°, 45°, 90°, T-pipes: 45°, 90°, reducers, watertight connectors for concrete wells, Pecor Quattro wells.

A specific information (on products) is available on the producer website: [www.viacon.ro](http://www.viacon.ro).

## **LIFE CYCLE ASSESSMENT (LCA) – general rules applied**

### **Declared unit**

The declaration refers to declared unit (DU) – 1 ton of the Pecor pipe manufactured in Romania.

### **Allocation**

The allocation rules used for this EPD are based on general ITB PCR A v. 1.6. Production of the plastic pipes and retention tanks is a line process conducted in the manufacturing plant of VIACON ROMANIA SRL located in Prejmer (Romania). All impacts from raw materials extraction and processing are allocated in module A1 of the LCA. Impacts from the global line production were inventoried and 100% was allocated to the production of the steel products based on the products mass basis. Water and energy consumption, associated emissions and generated wastes are allocated to module A3. The weighted average effect of the coatings is used. Utilization of packaging material was taken into consideration.

### **System limits**

The life cycle analysis (LCA) of the declared products covers: product stage – modules A1-A3, A4, end of life – modules C1-C4 and benefits and loads beyond the system boundary – module D (cradle-to-gate with options) in accordance with EN 15804+A2 and ITB PCR. Energy and water consumption, emissions as well as information on generated wastes were inventoried and were included in the calculations. It can be assumed that the total sum of omitted processes does not exceed 5% of all impact categories. In accordance with EN 15804+A2, machines and facilities (capital goods) required for the production as well as transportation of employees were not included in LCA.

### **Modules A1 and A2: *Raw materials supply and transport***

The first module includes extraction and production of raw materials used in manufacturing process, mainly polyethylene granulates (HDPE), as well as additives used in small amounts. 75% of HDPE is made of recycled content. Means of transport include lorries with loading capacity <10 t and > 16 t. European standards for average combustion were used for calculations. The first module includes extraction and production of raw materials used in manufacturing process, mainly polyethylene granulates, as well as additives used in small amounts.

### **Module A3: *Production***

A scheme of the plastic pipes and retention tanks production process presented in Fig. 2. HDPE compound is supplied (in either plastic bags or bulk form) and filled into silos and storage bins. From silos raw materials are carried to each pipe extruder through vacuum pressure transfer system, then dosed by gravimetric weighing system. The raw materials are melted at high temperature in the extruders and pushed through a die-head to form a double-layer sleeve. Later a pipe is formed with initial cooling provided by the means of water applied evenly through the spraying nozzles.

### **Module A4: *Transport to construction site***

Transportation impacts occurred from final products delivery to construction site (A4) cover fuel direct exhaust emissions, environmental impacts of fuel production, as well as related infrastructure emissions. Transportation from Viacon factory to construction site creates impact to the environment and is calculated in product LCA. Product is delivered by lorry with average distance of 500 km, therefore emissions are caused by fuel. During transportation there is not product or packaging loss.

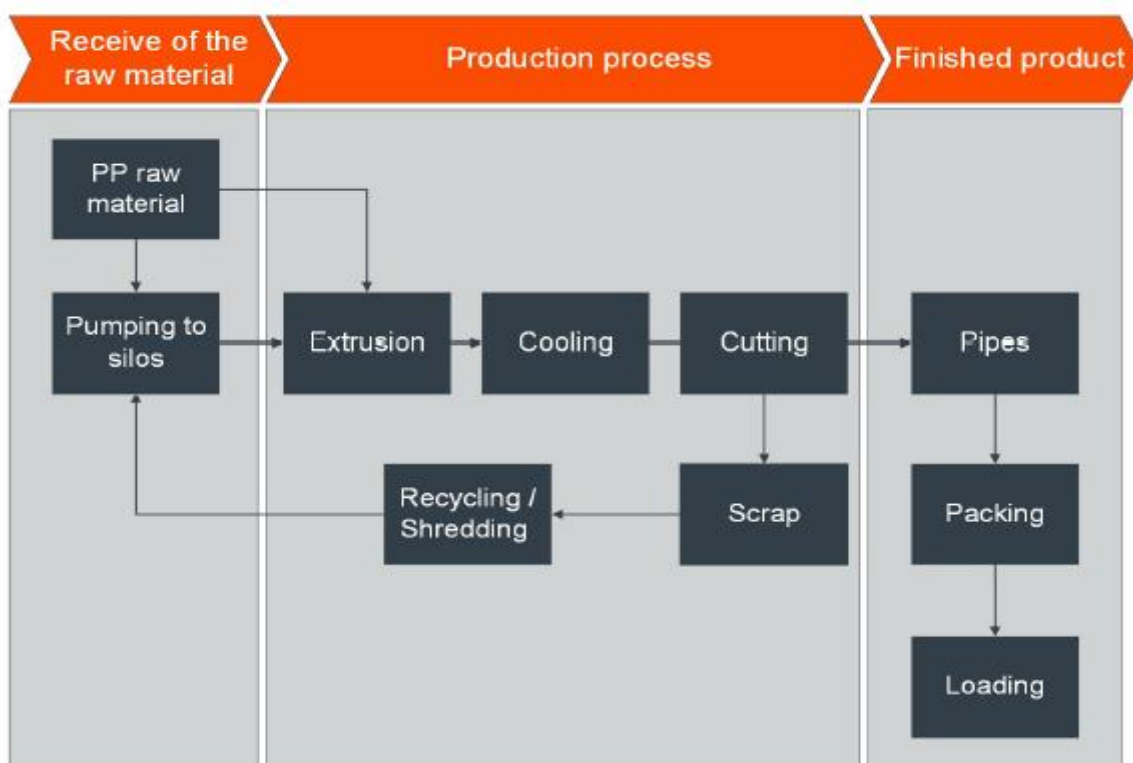

Fig. 2. A scheme of the production process

#### Modules C1-C4 and D: End-of-life (EoL)

End of Life stage for product occurs when pipe needs to be replaced. Since the consumption of energy and resources is negligible for disassembling of the end-of-life product, a precise modeling of impacts occurring at the deconstruction stage -the module C1 was estimated based on the existing literature (energy consumption on the standard demolition process). In the adapted end-of-life scenario, the deconstructed products (100% recovery, Table 1) are transported to a waste processing plant distant by 100 km on > 16t lorry EURO 5, where undergo shredding (C3). Landfill scenario is 50% of products (C4), 25% is recycled and 25% incinerated. The recycled packaging material can be processed into granules for new HDPE products. Module D presents credits resulting from the recycling of the plastic scrap, and plastic incineration.

Table 1. End-of-life scenario for the plastic pipes manufactured by ViaCon Romania.

Material		Recycling	Incineration	Landfilling
Plastic scrap	100%	25%	25%	5%

**Data quality**

The data selected for LCA originate from ITB-LCI questionnaires completed by producer using the inventoried data, ITB database and Ecoinvent v.3.9.1. No specific data collected is older than five years and no generic datasets used are older than ten years. The representativeness, completeness, reliability, and consistency are judged as good.

**Data collection period**

Primary data provided by VIACON ROMANIA SRL covers a period from 01.01.2022 to 31.12.2022 (1 year). The life cycle assessments were prepared for Romania and Europe as reference area.

**Assumptions and estimates**

The impacts of the representative steel products were aggregated using weighted average (including averaged coverings). Impacts were inventoried and calculated for all steel products.

**Calculation rules**

LCA was performed using ITB-LCA tool developed in accordance with EN 15804+A2.

**Databases**

The data for the LCA calculation comes from Ecoinvent v.3.9.1. Specific data quality analysis was a part of an external audit. The carbon footprint of Romania electricity used for calculation is 0.36 kg CO<sub>2</sub>/kWh.

**Other information**

The product does not contain any REACH SVHC substances in amounts greater than 0,1 % (1000 ppm).

**LIFE CYCLE ASSESSMENT (LCA) – Results**

**Declared unit**

The declaration refers to declared unit (DU) – 1 ton of the plastic pipes manufactured by VIACON ROMANIA SRL.

*Table 2. System boundaries (included life cycle modules) for the environmental characteristic of the plastic pipes.*

## Type III Environmental Product Declaration No. 523/2023

### Verification

The process of verification of this EPD is in accordance with ISO 14025 and ISO 21930. After verification, this EPD is valid for a 5-year-period. EPD does not have to be recalculated after 5 years, if the underlying data have not changed significantly.

The basis for LCA analysis was EN 15804 and ITB PCR A v.1.6.
Independent verification corresponding to ISO 14025 (subclause 8.1.3.) <input checked="" type="checkbox"/> external <input type="checkbox"/> internal
External verification of EPD: Halina Prejzner, Ph.D. eng.  LCA, LCI audit and input data verification: Michał Piasecki, Ph.D, D.Sc., eng, m.piasecki@itb.pl

Note 1: The declaration owner has the sole ownership, liability, and responsibility for the for the information provided and contained I EPD. Declarations of construction products may not be comparable if they do not comply with EN 15804+A2. For further information about comparability, see EN 15804+A2 and ISO 14025.

Note 2: Note: ITB is a public Research Organization and Notified Body (EC Reg. no 1488) to the European Commission and to other Member States of the European Union designated for the tasks concerning the assessment of building products' performance. ITB acts as the independent, third-party verification organization (ISO 17025/17065/17029). ITB-EPD program is recognized and registered member of The European Platform - Association of EPD program operators and ITB-EPD declarations are registered and stored in the international [ECO-PORTAL](#).
