ITB is the verified member of The European Platform for EPD program operators and LCA practitioner www.eco-platform.org

Basic information

This declaration is the Type III Environmental Product Declaration (EPD) based on EN 15804+A2 and verified according to ISO 14025 by an external auditor. It contains the information on the impacts of the declared construction materials on the environment and their aspects verified by the independent body according to ISO 14025. Basically, comparison or evaluation of EPD data is possible only if all the compared data were created according to EN 15804+A2.

Life cycle analysis (LCA): A1-A3, A4-A5, C1-C4 and D modules in accordance with EN 15804+A2 (Cradle-to-Gate with options)

Product standards: EN 485-1 to EN 485-4, EN 541, EN 546-1 to EN 546-4, EN 683-1 to EN 683-3, EN 1386, EN 1396

The year of preparing the EPD: 2024

Service Life: distribution, further processing and use of the products, as well as end-of-life treatment are unknown

PCR: ITB-PCR A v. 1.6 (PCR based on EN 15804+A2)

Declared unit: 1 kg

Reasons for performing LCA: B2B

Representativeness: Poland, European, 2023

MANUFACTURER

Gränges Konin S.A. is a plant in Konin (Poland) producing aluminium products such as: materials for heat exchangers, construction and structural sheets, materials for battery housings, materials for closures and packaging, and common alloys for the distribution industry.

The production plant in Konin began operating as a state-owned enterprise in 1966. Initial activity included the production of aluminium in the electrolysis and foundry departments. In 1972, a rolling mill department was launched, which initiated the production of rolled flat products from aluminium and aluminium alloys. The company

operating under the name Huta Aluminium Konin was privatized in 1995, and in 2008 it was merged with Impexmetal S.A. In 2009, the electrolysis department was closed, and production activities were continued only in the foundry and rolling mill departments.

In 2020, the plant was taken over by Gränges AB and the Company's name was changed to Gränges Konin S.A. The annual production capacity of the plant in Konin is approximately 100 thousand tons of flat rolled products, and thanks to investments in both the foundry and rolling mill departments, the plant's annual production capacity in 2025 is to increase to 140 thousand tons of rolled products.

Fig. 1 The view of Gränges Konin S.A. plant in Konin

PRODUCTS DESCRIPTION AND APPLICATION

Gränges specializes in engineering and producing rolled aluminium products for heat exchangers and selected niche applications. The customers are in the automotive industry, the stationary heat exchanger industry, and niche markets including transformers and food packaging. Within the industry for rolled products for brazed heat exchangers, Gränges is the global leader with a market share of approximately 20 per cent. Headquartered in Stockholm, Sweden, we have operations in Europe, China and the United States. Gränges has been a leader in innovative aluminium solutions for decades. Today, the company has a demonstrated industry-leading sustainability performance. EcoVadis, the largest independent provider of business sustainability ratings, has for example awarded Gränges a Platinum rating which ranks the company in the top 1% of companies assessed globally in the industry. The specification of aluminium ingots, plates, sheets, strips and profiles are presented in Table 1.

Type III Environmental Product Declaration No. 606/2024

Surface degreasing	+	+
Conversion layer	+	+
Greasing / Lubricating	+	-
One side PVC foil surface application	+	+
Paper interleaving	-	+

a- depends on the thickness and temper

LIFE CYCLE ASSESSMENT (LCA) – general rules applied

Declared Unit

The declared unit is 1 kg of aluminum product (averaged).

System boundary

The life cycle analysis of the declared products covers “Product Stage” A1-A3, “Transport and Installation”, A4-A5, “end of life” C1-C4+D modules in accordance with EN 15804+A2 and actual ITB PCRA (cradle to gate with options). Energy and water consumption, emissions as well as information on generated wastes were inventoried in manufacturing plant (LCI) and were included in the calculation. It can be assumed that the total sum of omitted processes does not exceed 2% of all impact categories. In accordance with EN 15804+A2, machines and facilities (capital goods) required for the production as well as transportation of employees were not included in LCA. Inputs and processes of product system are presented in Figure 1.

Allocation

The allocation principles used in this EPD are based on the general standards ITB PCR A v. 1.6 and EN 15804+A2. The production of aluminium products is carried out by Gränges Konin S.A. at the production plant located in Konin (Poland) and covers 100% of production. The allocation is made based on the product weight. All predicted impacts from the extraction and processing of raw materials are allocated in module A1 of the LCA. Raw materials for production such as external scrap for remelting, primary aluminium and recycled aluminium are supplied from external suppliers. Impacts from the global linear production of Gränges Konin S.A. are estimated at 100% and have been assigned to the production of aluminium products. Water and energy consumption, related emissions and waste generation are assigned to module A3. Packaging materials are taken into account.

System limits

It can be assumed that the total sum of omitted processes does not exceed 2% of all impact categories. In accordance with EN 15804+A2, machines and facilities (capital goods) required for the production as well as transportation of employees were not included in LCA.

Modules A1 and A2: Raw materials supply and transport

This modules A1 and A2 represents the extraction and processing of raw materials, the transport to production site (primary aluminium, recycled aluminium and master alloys). Aluminium input material, auxiliary materials come from both local and foreign suppliers. Means of transport include ships and lorries. For calculation purposes Polish and European fuel averages were applied. Delivery of external scrap from an average distance of 333 km and recycled aluminium from 725 km by truck. Primary aluminium is delivered from several locations by ships and trucks.

Module A3: Production

The plant produces aluminium alloys in series 1xxx, 3xxx, 4xxx, 5xxx, 6xxx and 8xxx. Production is based on the direct casting method (including primary and recycled material) carried out in the casting house. Further processing takes place in appropriate hot and cold rolling mills. Finishing equipment includes tension levelling, automatic inspection systems, slitting machines for thin and thick sheets, as well as lines for cutting to length and chemical processing. The production processes are shown in Figure 2. Electricity supplied is from grid electricity.

Type III Environmental Product Declaration No. 606/2024

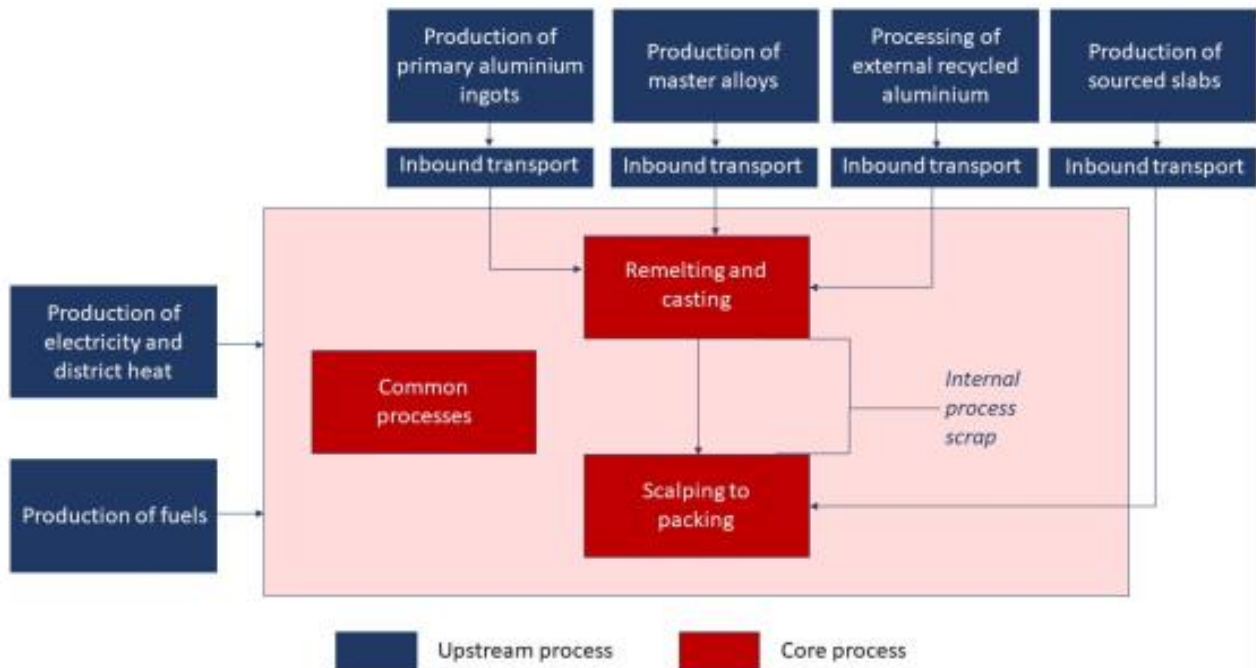

Figure 2. Diagram of the manufacturing process of aluminium ingots, plates, sheets, strips and profiles

Module A4: Transport to consumer

Vehicle transport at distance 100 km is considered (emission standard: Euro 5) with 100% load capacity.

Modules C1-C4 and D: End-of-life (EOL)

It is assumed that at the End-of-Life, the aluminium products are dismantled using power tools. Recovered material is transported to waste processing plant distant of about 100 km using > 24t lorry with 85% capacity utilization and fuel consumption of 35 L per 100 km (module C2). About 90% of the resulting aluminium scrap undergo recycling after shredding (C3) while the remaining 10% of them is forwarded to landfill in the form of mixed construction and demolition waste. Environmental burdens declared in module C4 are associated with treatment of aluminium scrap, prepared for recycling at refiner and waste-specific emissions to air and groundwater via landfill. A potential credit resulting from the recycling of the aluminium scrap are presented in module D (calculated for the primary aluminium content).

Table 2. End-of-life scenario for the aluminium products produced by Gränges Konin S.A.

Material	Material recovery	Recycling	Landfilling
Aluminium scrap	100%	90%	10%

Data collection period

The data for manufacture of the declared products refer to period between 01.01.2023 – 31.12.2023 (1 year). The life cycle assessments were prepared for Poland and Europe as reference area.

Data quality

The values determined to calculate A1-A3 originate from verified Process LCI inventory data from manufacturing plant. A1 values were prepared considering input products characteristics and are based on Ecoinvent v 3.10 and available supplier EPDs. The energy consumption in production and its impact on the production process were inventoried and calculated. For aluminium, the weighted average carbon footprint declared by suppliers was used. In accordance with Annex E of the EN 15804 + A2, a data quality assessment was performed. For technical representativeness, processes with a quality level of "very good" account for 99% of the value for climate change indicator. For geographical and time representativeness, processes level of "very good" is obtained.

Assumptions and estimates

The impacts of the representative product were aggregated using a weighted average (all products). According to the data adopted for the Ecoinvent v3.10 the scrap database, post-consumer is not burdened with the environmental impacts, however, scrap processing impacts were included.

Calculation rules

LCA was done in accordance with ITB PCR A document. Characterization factors are CML ver. 4.2 (GWP) and other based on EN 15804+A2. ITB-LCA own algorithms were used for impact calculations. A1 was calculated based on data from the specific data from manufacturing plant and using database (European Area) for resources. A3 and A2 are calculated based on the specific input data.

Databases

The data for the processes come from the following databases: Ecoinvent v.3.10, specific EPDs for suppliers. Specific data quality analysis was a part of external audit.

Additional information

The manufacturer provided certificates of origin of electricity from renewable energy sources (75%). Traditional electricity (Ecoinvent v.3.10 data) emission factor used is 0.685 kg CO₂/kWh. As a general rule, no particular environmental or health protection measures other than those specified by law are necessary. Based on the data provided, the average recycled content per 1 kg of product is 0.65 kg.

Type III Environmental Product Declaration No. 606/2024

LIFE CYCLE ASSESSMENT (LCA) – Results

Declared unit

The declaration refers to declared unit (DU) – 1 kg of the aluminium products manufactured by Gränges Konin S.A. in Poland. The following life cycle modules (Table 2) were included in the analysis.

Table 2 System boundaries for the environmental characteristic of the product.

Type III Environmental Product Declaration No. 606/2024

Verification

The process of verification of this EPD is in accordance with ISO 14025 and ISO 21930. After verification, this EPD is valid for a 5-year-period. EPD does not have to be recalculated after 5 years, if the underlying data have not changed significantly.

The basis for LCA analysis was EN 15804 and ITB PCR A
Independent verification corresponding to ISO 14025 (subclause 8.1.3.) <input checked="" type="checkbox"/> external <input type="checkbox"/> internal
External verification of EPD: PhD. Eng. Halina Prejzner LCI audit and verification: Filip Poznański, M.Sc. Eng. LCA, LCI audit and input data verification: Michał Piasecki, PhD., D.Sc., Eng.

Note 1: The declaration owner has the sole ownership, liability, and responsibility for the information provided and contained in EPD. Declarations of construction products may not be comparable if they do not comply with EN 15804+A2. For further information about comparability, see EN 15804+A2 and ISO 14025.

Note 2: ITB is a public Research Organization and Notified Body (EC Reg. no 1488) to the European Commission and to other Member States of the European Union designated for the tasks concerning the assessment of building products' performance. ITB acts as the independent, third-party verification organization (ISO 17025/17065/17029). ITB-EPD program is recognized and registered member of The European Platform - Association of EPD program operators and ITB-EPD declarations are registered and stored in the international ECO-PORTAL.

CERTIFICATE No 606/2024 of TYPE III ENVIRONMENTAL DECLARATION

Products:

Aluminium slabs, plates, sheets, strips and profiles

Manufacturer:

Gränges Konin S.A.

B. Prusa 2, 00-493 Warszawa, Poland

Production plant

Hutnicza 1, 62-510 Konin, Poland

confirms the correctness of the data included in the development of
Type III Environmental Declaration and accordance with the requirements of the standard

EN 15804+A2

Sustainability of construction works.

Environmental product declarations.

Core rules for the product category of construction products.

This certificate, issued on 20th September 2024 is valid for 5 years
or until amendment of mentioned Environmental Declaration

Head of the Thermal Physic, Acoustics
and Environment Department

Agnieszka Winkler-Skalna, PhD

Deputy Director
for Research and Innovation

Krzysztof Kućzyński, PhD
